5 ORDER REVIEW

Dragonpay Notification Parser

With this extension, you have an Dragonpay Notification Parser, meaning when Dragonpay Gateway receive a payment, it's automatically send an back-end server-to-server communication to your Magento postback URL, and this extension automatically update transactions status and orders within Magento.

Web Service Integration

Dragonpay Gateway send one single notification by transaction status update without resending if the communication was not received.

Short Internet connection interruptions are possible, and having missing paid transactions and missing update status on orders, invoices in your Magento was not an option.

That why we integrated Dragonpay GetMerchantTxns - Web Service Method with Magento, we made it as a cron job (auto scheduled task) that must be run at least every 24 hours. It's synchronize your last 7 days transactions at Dragonpay to never missing transactions and order status update in Magento.

Test Mode

Allow you to use your Dragonpay test account and start testing orders and payments without real money transaction by selecting the “Bogus Bank Online” (with any id and password) or the “Bogus Bank Over-the-Counter”.
